1 Цель работы

Получение навыков правильной работы с репозиториями git.

2 Теоретические сведения

- Gitflow Workflow опубликована и популяризована Винсентом Дриссеном.
- Gitflow Workflow предполагает выстраивание строгой модели ветвления с учётом выпуска проекта.
- Данная модель отлично подходит для организации рабочего процесса на основе релизов.
- Работа по модели Gitflow включает создание отдельной ветки для исправлений ошибок в рабочей среде.
- Последовательность действий при работе по модели Gitflow:
 - Из ветки master создаётся ветка develop.
 - Из ветки develop создаётся ветка release.
 - Из ветки develop создаются ветки feature.
 - Когда работа над веткой feature завершена, она слиивается с веткой develop.
 - Когда работа над веткой релиза release завершена, она слиивается в ветки develop и master.
 - Если в master обнаружена проблема, из master создаётся ветка hotfix.

- Когда работа над веткой исправления hotfix завершена, она сливаются в ветки develop и master.

3 Выполнение лабораторной работы

3.1 Работа с тестовым репозиторием

Для работы с Node.js добавим каталог с исполняемыми файлами, устанавливаемыми yarn, в переменную PATH.

```
sasuhorukov@sasuhorukov:~$ pnpm setup
Appended new lines to /home/sasuhorukov/.bashrc

Next configuration changes were made:
export PNPM_HOME="/home/sasuhorukov/.local/share/pnpm"
case ":$PATH:" in
  *":$PNPM_HOME:") ;;
  *) export PATH="$PNPM_HOME:$PATH" ;;
esac

To start using pnpm, run:
source /home/sasuhorukov/.bashrc
sasuhorukov@sasuhorukov:~$ source ~/ .bashrc
sasuhorukov@sasuhorukov:~$
```

Рисунок 3.1: Node.js

Программа commitizen используется для помощи в форматировании коммитов. При этом устанавливается скрипт git-cz, который мы и будем использовать для коммитов.

```
sasuhorukov@sasuhorukov:~$ pnpm add -g commitizen

Update available! 10.27.0 → 10.30.0.
Changelog: https://pnpm.io/v/10.30.0
To update, run: pnpm self-update

Программа standard-changelog используется для помощи в создании логов.

```
sasuhorukov@sasuhorukov:~$  
sasuhorukov@sasuhorukov:~$ pnpm add -g standard-changelog

Делаем первый коммит и выкладываем на github.

Необходимо заполнить несколько параметров пакета.

Таким образом, файл package.json приобретает вид:

The screenshot shows a code editor window with the following interface elements:

- Top bar: "Open" button, dropdown menu, "+" button, file name "package.json", path "~/git-extended", and "Save" button.
- Code area:

```

```

Рисунок 3.4: package.json

Добавим новые файлы.

Выполним коммит.

Отправим на github.

```

Создадим ветку для новой функциональности По окончании разработки новой функциональности следующим шагом следует объединить ветку feature_branch с develop:

```
sasuhorukov@sasuhorukov:~/git-extended$ git flow feature start feature_branch  
Switched to a new branch 'feature/feature_branch'
```

Summary of actions:

- A new branch 'feature/feature_branch' was created, based on 'develop'
- You are now on branch 'feature/feature_branch'

Now, start committing on your feature. When done, use:

```
git flow feature finish feature_branch
```

```
sasuhorukov@sasuhorukov:~/git-extended$ touch test2  
sasuhorukov@sasuhorukov:~/git-extended$ git flow feature finish feature_branch  
Switched to branch 'develop'  
Your branch is up to date with 'origin/develop'.  
Already up to date.  
Deleted branch feature/feature_branch (was a630965).

```

Summary of actions:

- The feature branch 'feature/feature_branch' was merged into 'develop'
- Feature branch 'feature/feature_branch' has been locally deleted
- You are now on branch 'develop'

```
